

We offer you our spacers made out of alloyed steel of high resistance to wear, hardened and with strict tolerances to guarantee perfect mountings and, in that way and at the same time the highest efficiency of the knives and the best cutting quality. We suggest providing you with "hollow spacers" in order to make it easier for the users to mount those of a heavier weight. Likewise, and as alternative, we can manufacture those spacers in steel and PA Ertalon, and the weight would in that way be even lighter.

Taking into account that in the final mounting the tolerances of all the parts have an effect on the knives cutting tolerance. **ALFE** recommends you the following parameters:

PARAMETERS	THICKNESS	STANDARD	PRECISION	SUPERPRECISION
Thickness		+ / - 0,005 mm	+ / - 0,003 mm	+ / - 0,001 mm
Paralelism		+ / - 0,005 mm	+ / - 0,003 mm	+ / - 0,002 mm
Flatness	e < 2 mm 2 < e < 5 5 < e < 10 10 < e	0,2 0,1 0,05 0,001	0,1 0,05 0,03 0,005	0,05 0,03 0,02 0,002
